

Buka aplikasi Android Studio

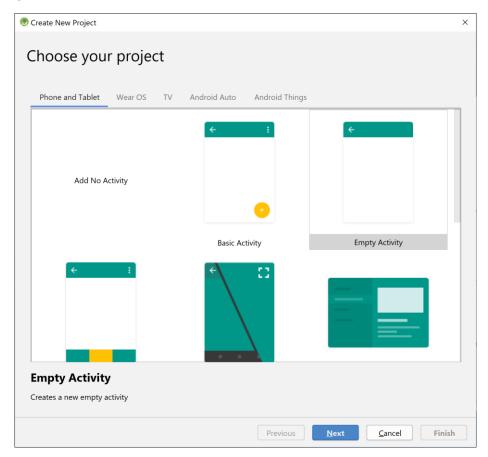

Klik tombol **Start a new Android studio project** (pilihan paling atas). Isi **Application name** dengan nama project yang diinginkan. Disini penulis memberikan nama "pelembagus". Isi **Company domain** dengan domain pribadi pembaca atau domain perusahaan. Tentukan lokasi project di **Project location**, usahakan agar tidak menyimpannya di lokasi yang mengandung spasi karena terkadang bisa menyebabkan *error* (klik tombol ... yang ada disebelah kanan). Terakhir **jangan lupa untuk memilih Bahasa Kotlin dan mencentang Include Kotlin support**. Klik tombol **Next**.

Dijendela berikutnya, kita akan diminta untuk memilih *template* awal. Cukup pilih **Empty Activity** dan klik tombol **Next**.

Jika tidak ada yang berubah dan selesai build, maka aplikasi Android Studio akan menampilkan halaman blank. Karena belum ada file yang dibuka. Lalu yang harus dilanjutkan selanjutnya adalah menginput kode dibawah kedalam **MainActivity.kt**

MainActivity.kt

```
package com.example.punyamitchell.pelembagus
import android.support.v7.app.AppCompatActivity
import android.os.Bundle
import android.support.v7.widget.GridLayoutManager
import kotlinx.android.synthetic.main.activity main.*
class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity main)
        val poster = resources.obtainTypedArray(R.array.array poster)
        val title = resources.getStringArray(R.array.array movie)
        val description = resources.getStringArray(R.array.array desc)
        rv movie.hasFixedSize()
        rv_movie.layoutManager=GridLayoutManager(this,2)
        val adapter=MovieAdapter(this, poster, title, description)
        rv movie.adapter=adapter
        adapter.notifyDataSetChanged()
}
```

Fungsi override diatas adalah untuk mengambil array dari **val** yang telah dipanggil pada movie adapter dibawah ini

Belajar Kotlin

MovieAdapter.kt

```
package com.example.punyamitchell.pelembagus
import android.content.Context
import android.content.res.TypedArray
import android.support.annotation.DrawableRes
import android.support.v7.widget.RecyclerView
import android.view.LayoutInflater
import android.view.View
import android.view.ViewGroup
import android.widget.Toast
import com.squareup.picasso.Picasso
import kotlinx.android.synthetic.main.listmovie.view.*
class MovieAdapter (val context: Context, val posters: TypedArray, val titles:
Array<String>,val descriptions: Array<String> ):
    RecyclerView.Adapter<MovieAdapter.MovieViewHolder>() {
    override fun onCreateViewHolder(p0: ViewGroup, p1: Int): MovieViewHolder {
MovieViewHolder(LayoutInflater.from(context).inflate(R.layout.listmovie,p0,false))
    override fun onBindViewHolder(p0: MovieViewHolder, p1: Int) {
        p0.bindItem(titles[p1], descriptions[p1], posters.getResourceId(p1,0))
    override fun getItemCount(): Int {
        return titles.size
///untuk gambar menggunakan Picasso
    inner class MovieViewHolder(view: View):RecyclerView.ViewHolder(view) {
        fun bindItem(title: String, description: String, @DrawableRes poster: Int)
            Picasso.get()
                .load(poster)
                .into(itemView.iv poster)
            itemView.setOnClickListener{
                Toast.makeText(context, title, Toast.LENGTH SHORT).show()
            }
        }
    }
}
```

Fungsi override diatas berujuan untuk memanggil array pada direktori res\values\strings.xml yang sudah dimasukan. Jika belum buatlah file baru dengan format xml lalu copy xml data dibawah ini. Lalu masukan poster yang bisa didownload dimarih. Setelah itu letakan poster yang sudah didownload pada direktori **src\main\res\drawable** *pastedisini.

Belajar Kotlin

Membuat aplikasi sederhana untuk menampilkan film populer

strings.xml

res\values\strings.xml

(Data Film)

```
<resources>
        <string name="app name">Good Movie to Watch</string>
        <!-- Movie title -->
        <string-array name="array movie">
            <item>Ant-man and The Wasp</item>
            <item>Arctic</item>
            <item>Avengers: Infinity War</item>
            <item>BumbleBee</item>
            <item>Creed II</item>
            <item>Glass</item>
            <item>How to Train Your Dragon: The Hidden World</item>
            <item>Johnny English: Strikes Again</item>
            <item>Mission Impossible: Fallout</item>
            <item>The Kid Who Would be King</item>
        </string-array>
        <!-- Movie poster -->
        <integer-array name="array_poster">
            <item>@drawable/img_antman_wasp</item>
            <item>@drawable/img_arctic</item>
            <item>@drawable/img_avengers_infinity</item>
            <item>@drawable/img bumblebee</item>

            <item>@drawable/img johnny english</item>
            <item>@drawable/img mi fallout</item>
            <item>@drawable/img the kid who would be king</item>
        </integer-array>
        <string-array name="array desc">
                Just when his time under house arrest is about to end,
Scott Lang once again puts his freedom at risk to help Hope van Dyne and
Dr. Hank Pym dive into the quantum realm and try to accomplish, against
time and any chance of success, a very dangerous rescue mission.
            </item>
            <item>
                A man stranded in the Arctic is finally about to receive
his long awaited rescue. However, after a tragic accident, his
opportunity is lost and he must then decide whether to remain in the
relative safety of his camp or embark on a deadly trek through the
unknown for potential salvation.
            </item>
            <item>
                As the Avengers and their allies have continued to
protect the world from threats too large for any one hero to handle, a
new danger has emerged from the cosmic shadows: Thanos. A despot of
intergalactic infamy, his goal is to collect all six Infinity Stones,
artifacts of unimaginable power, and use them to inflict his twisted
```

Belajar Kotlin

Membuat aplikasi sederhana untuk menampilkan film populer

Untuk layout interfacenya seperti script dibawah. Menggunakan frameLayout agar memudahkan pemetakan itemnya

Activity_main.xml

res\Layout\

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <android.support.v7.widget.RecyclerView
        android:id="@+id/rv_movie"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:layout_height="match_parent"
        />
        </FrameLayout>
```

Listmovie.xml

res\Layout\

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"</pre>
             android:layout width="match parent"
             android:layout height="match parent">
    <ImageView</pre>
            android:id="@+id/iv poster"
            android:adjustViewBounds="true"
            android:layout width="match parent"
            android:layout height="300dp"
    />
    <TextView
            android:layout width="match parent"
            android:layout height="wrap content"
            android:id="@+id/rv movie"
            android:layout_marginTop="300dp"/>
</FrameLayout>
```

Untuk Running bisa melalui emulator atau smartphone dengan opsi pengembang aktif.

Terima kasih, selamat mencoba... bisa juga download.apk langsung
